RESPONSE TO RESTRICTION REQUIREMENT

Dear Sir:

In the Restriction Requirement mailed on *April 3, 2006*, the Examiner restricted the pending claims of the above application into the following five Groups:

Group I: Claims 1-17, 32-36 and 38-43, drawn to a method of screening for compounds that inhibit melanogenesis comprising treating cells expressing a tyrosine-encoding gene with a test compound that inhibits Melano-genesis. (Claims 32-36 and 38-43 will be examined with this Group to the extent the method reads on inhibiting P protein.)

Group II: Claims 18-34 and 37-43, drawn to a method of screening for compounds that increase melanogenesis comprising treating cells expressing a tyrosine-encoding gene with a test compound that increases Melanogenesis. (Claims 32-34 and 37-43 will be examined with this Group to the extent the method reads on increasing P protein.)

Group III: Claims 44-56, drawn to methods of decreasing melanin production in a melanocyte comprising contacting the melanocyte with an effective amount of a compound that effects an alteration in late endosomal/lyso-somal trafficking and **Claims 57-69**, drawn to a method of reducing skin pigmentation comprising contacting skin with a pharmaceutically effective amount of a compound that effects an alteration in endosomal/lysosomal trafficking.

Group IV: Claims 70-73, drawn to a method of activating melanogenesis comprising contacting a melanocyte with diminished or absent P protein activity with a compound that inhibits ATPase.

Group V: Claims 74-77, drawn to a method of treating tyrosinase-positive, oculocutaneous albinism in an individual in need thereof comprising contacting the skin of the individual with a pharmaceutically effective amount of a compound that inhibits ATPase.

In response to the Restriction Requirement, Applicants elect the claims of **Group III**, namely **claims 44-56** and **57-69**.
